Dr Marthin Botha

Ph.D. Biochemistry, B.A. Psychology, ND/DO

Disease has ravage mankind since the beginning of time. I believe we are on the brink of the most devastating war our planet has ever experienced. Millions of people will die prematurely if we do not change the way we live our lives. The enemies have no conscience. They are invisible, invincible and believe it or not, we created them. The worst part of this is that those we trusted have misinformed us, leaving the majority of the population defenceless against our worst nightmare - Killer Mutant Viruses and Bacteria. This is no time to be a crowd follower or a crowd pleaser. This is a wakeup call. The fight is already going on around you and maybe even in you. It is called Bacterial Warfare.

The man who follows the crowd will only get as far as the crowd. What do we mean by this? All we have to do is turn on the TV or radio or open the newspaper to hear about the mutant killer viruses and bacteria that are resistant to any type of drug therapy. What about the flesh eating bacteria and the avian virus, where millions of chickens had to be killed due to the threat of spreading it to the human population? The latest threat is the H1M1 (Swine Flu) epidemic, threatening to wipe out the human race.

What about the comeback of diseases that have supposedly been cured? 'USA Today' ran a story entitled "Ancient Ills Return with a Vengeance". Eleven diseases believed to be gone are back, including Ebola, Hantavirus, and even the Black Plague.

There is a pneumonia that even the young are now being afflicted with. The twenty-four hour flu is now the two week or one month flu. The killer bugs are becoming stronger as our immune systems are growing weaker. If we continue on our present path we will always be prone to these diseases. Let's tell it like it is. Super Bugs are winning the war. Drug resistant bacteria are breeding everywhere. They are infecting our hospitals at an alarming rate, preying on the weak and vulnerable due to nutritional mismanagement and overuse of antibiotics. Infected patients are put into isolation due to bacteria that antibiotics cannot treat effectively.

This bacterium is Methicillin Resistant Staphylococcus Aureus, commonly known as MRSA, and is mainly caught in hospitals. Three hundred cases were reported in Australia in 1994. Over four thousand cases were reported in 1997. Since then, the authorities have been trying to keep the statistics hidden 'under their hat.' However, as a primary health care professional, speaking daily to people who are experiencing these infections, I believe that these conditions are increasing at an exponential rate. I am certain that many of the people, it may even be you, reading this will concur with me and will have a personal story to tell, about the firsthand experience with these mutant viruses, fungi and bacteria.

These hospital-bred infections are an epidemic, which have lethal side effects. What we have seen so far, is only the tip of the iceberg. Antibacterial cleansers and antibiotics, indiscriminately used, have turned our hospitals into a treacherous war zone due to these Killer Bugs and their ability to mutate and adapt like the cockroach.

So isn't it time we do something about it? A saying was coined in the ancient of times namely; "He/she was born with a silver spoon in the mouth." What that really meant, was that person was thought of as being "lucky" or "blessed" with prosperity and health. So, you may ask; "I understand that silver cutlery are a sign of Wealth, but what has that to do with Health?"

Silver, a soft precious metal, has been known, since the beginning of time, to be the absolute lethal weapon against the virus and bacteria. The use of silver cutlery and utensils, apart from displaying the wealth of the household, was in fact protecting that household against these invaders. The food acids would "oxidise" some of the silver and that would be ingested in the food as a "trace mineral" which will then be used by the body to annihilate any and every rogue bacteria and/or virus that entered the body either via the food, the skin, open wounds or the airways of that person.

The not so well off, also had a certain amount of protection from the silver, as that was the material that the coins, serving as money, were made of. By handling these coins, some silver will have rubbed off on their hands and then being absorbed through the skin. It was also tradition, to place silver coins in a pudding on festive occasions, believing that the person who did find it will be blessed with health and prosperity. But that era is also just a dim memory for some senior people.

Fortunately, there are still a few scientists in the world that will take the time to look at the past to try and find "what used to be effective." As a result of this, we are blessed with a fantastic no nonsense product, from the past, however, due to

research it has been improved so that we as modern citizens of this planet can enjoy its effects and benefits with certainty. The product is Colloidal, represented here as SilverC. In the following pages there is vital information for you to refer to, now and in years to come.

Introduction

SilverC is the exclusive trade name used by Cynthia's Naturals for the range of products containing Colloidal Silver. SilverC has been analysed and tested by Environmental and Analytical Laboratories at the Charles Stuart University Campus in Wagga Wagga NSW Australia. Report No. 1209-0083. It was found to be of the highest quality, free from any contaminants. Further tests revealed that the particle size of the Silver Ions is less than 3 angstroms, making it easier for absorption at a cellular level.

SilverC can be applied as a topical or internal anti-microbial tool. As a result, a wide range of infectious conditions (or secondary conditions that have their roots in an infectious condition) can be treated with SilverC.

Please Note: When measuring out SilverC it is best to use a Plastic spoon or a plastic or glass measuring (medicine) cup. As a metal spoon may attract the silver colloids, that is suspended in the SilverC solution, thus degrading the preparation.

Measurements:

1 Teaspoon = 5ml

1oz = 30ml (approximately)

1 tablespoon = 1oz = 30ml

Please Note!

The information published here must not be seen as Diagnosis, and should also not be seen as medical advice.

You must privately consult with your Healthcare Professional for your particular problem.

Note to SilverC users: Please note the differences between SilverC and Colloidal Silver. The information on this page is in reference to SilverC, not the old-style Colloidal Silver.

(Unless otherwise noted, all information on this page is sourced from Dr. Gordon Pedersen's book, A Fighting Chance, pages 42 to 124.)

Many additional applications of SilverC are also possible. For additional information, please read Dr. Pedersen's book. Please note that he refers to Colloidal Silver as SILVER SOL, however, SilverC is an identical product.

How and for what you can use SilverC

Extremely Safe

Extensive Research, testing and long-term use shows that SilverC is completely safe for everyone. This includes children, pregnant women and the elderly. Experts estimate that one would need to consume about 250ml of SilverC daily over a period of several years before even measurable amounts of silver would accumulate in the body. There have been no reported complaints involving SilverC and no negative side effects such as those witnessed with most prescription drugs.

Pet-Friendly

Hundreds of lab reports and research studies have documented the benefits of using SilverC with large as well as small pets and also with farm animals.

SilverC, your Travel Companion

SilverC boasts multi-faceted applications. It can be used inside the body (internal), as well as on the skin and in the orifices (external). SilverC can also be used as a tremendously effective household disinfectant, much like bleach or other cleaners - only it's much safer!

Emergency Preparedness

Because SilverC is inorganic with no chemicals or other additives, it can store for years at a time. Several agencies and organizations have recommended stockpiling SilverC as a potential agent in the fight against bioterrorism.

SilverC can purify water in as little as 4 minutes.

Dr. Paul K. Carlton, Director of the Integrative Centre for Homeland Security, Former Surgeon General of the United States Air Force, states: "I would like to bring to your attention a resource [SilverC] that I feel can be utilized in the area of bio-defence from bio-terrorism to infectious diseases such as SARS."

High Value - Low Cost

When you add up the cost of doctor visits (and the time to see the doctor), prescription medications, and other factors involving "conventional" health care, SilverC is a tremendous value. It is available without a prescription and can be used with the utmost confidence.

Quick Kill Time

Many medications dealing with conditions such as skin fungus or other infections can take weeks to work. SilverC, however, can be effective in just a few minutes. The SilverC begins to destroy pathogens in seconds and completely destroys them when in direct contact for 2-10 minutes.

Scientifically Supported

One hundred and eighty (180) lab reports and research studies have documented the benefits of using SilverC. In fact, scientists have found that the SilverC can destroy 99.9% of all bacteria, viruses, moulds, fungi and other pathogens it has been tested on within minutes of exposure.

These include malaria, common cold and flu viruses, numerous moulds, Methicillin-resistant staph (MRSA), salmonella, E. coli, and streptococcus, among many others.

How SilverC Works

The following quotations are from Dr. Gordon Pedersen's book "A Fighting Chance" (2nd. edition, page 15 - 18) and provide an overview of Silver Sol's four scientifically studied methods of attacking pathogens

Research continues to better understand the mechanisms of action that enable SilverC effectiveness against pathogens. At present, four methods have been isolated and documented. These are:

- ❖ Chemical Structure/Contact
- ❖ Resonance
- ❖ Magnetic Disruption of Viral DNA
- ❖ Cellular Communication

Chemical Structure/Contact

SilverC particles are tiny enough to be absorbed into a single red blood cell. Pure silver is supercharged and surrounded by a chemical shell that is missing two electrons (called ionic because it carries a charge.) This means the tiny silver particle wants to attach to the thin cell walls of pathogens and remove one or two electrons. This leaves a hole in the cell membrane and kills the pathogen. Normal cells have thicker, more protective cell membranes that have a balanced charge, resulting in selective protection from the silver's oxide coating that kills bacteria on contact.

Resonance

There are healthy and unhealthy resonances. For example,

imagine a vibrating back massager compared to the jolting frequency of a jackhammer. In a similar way, silver resonates at a frequency selectively destructive to pathogens. In fact, it has been measured to resonate at 890 to 910 terahertz. This is the same frequency at which germicidal ultraviolet light resonates. Imagine now tiny silver particles that are small enough to be absorbed into the red blood cells, and resonate at the perfect frequency to destroy bacteria, viruses, and yeast. These tiny "flashlights" circulate throughout every capillary in the body, disinfecting from the inside.

Magnetic Disruption of Viral DNA

A virus is constructed of a capsid that contains incomplete segments of DNA and RNA. These DNA segments carry a slight magnetic charge. There is a claw on the outside of the virus that attaches the virus to a healthy cell. Once the virus is attached to a healthy cell it can "inject" the incomplete DNA into the healthy cell, producing damage to the normal DNA and causing it to reproduce abnormally. This can cause viral diseases like influenza, hepatitis, and cervical cancer.

The new supercharged silver acts like a magnet that attracts the charged DNA particles. The DNA binds so tightly to the silver that it makes a chaotic tangle of incomplete genetic material that can never lengthen out, so it can never go through replication. This inactivates the virus and prevents replication of viral disease. Normal cells have thicker, more protected cell membranes with a balanced charge, which protects them from the silver's magnetic attraction.

Cellular Communication

Most cells communicate through a sugary coating. This

coating lets the cell know friend from foe. Silver has a "friendly" sugar coating that allows it to positively communicate with cells. This way, silver Nano-particles can enter into an abnormal cell and attack pathogens before they have a chance to replicate.

SilverC can be applied as a topical or internal anti-microbial tool. As a result, a wide range of infectious conditions (or secondary conditions that have their roots in an infectious condition) can be treated with SilverC.

A – Z Beneficial Applications

(Unless otherwise noted, all information on this page is sourced from Dr. Gordon Pedersen's book, A Fighting Chance, pages 42 to 124.)

Many additional applications of SilverC are also possible. For additional information, please read Dr. Pedersen's book. Please note that he refers to SilverC as SILVER SOL, however, it is the same product.

A

Abscesses

Because it's an open wound, an abscess can expose the blood flow and the lymph system to possible bacteria contamination. It is very important to kill the bacteria in the wound.

SilverC can be used as a mouth rinse for an abscess in the mouth. Hold one ounce of liquid in your mouth for at least six minutes, two to three times a day. It can then be swallowed, providing an internal rinse as well.

You can also use liquid SilverC as a rinse for an abscess on the outside of your body. When you first clean the abscess, rinse it with liquid SilverC. If it requires a bandage, soak the gauze bandage in liquid SilverC and put a drop of gel on the surface before taping it into place.

For a very small abscess, you can simply put a drop of the SilverC gel on a Band-Aid and place it over the abscess. For a large abscess, spray the gel or the liquid SilverC on the wound

one to four times a day.

Acne

Acne attacks people of all ages, from infants to adults. Acne can be caused by bacteria getting inside of a hair follicle or a sweat gland called a sebaceous gland. Once the bacteria gets under the skin it will duplicate itself, dissolving healthy tissue in the process and leaving scars behind. To get rid of the acne, you must get rid of the bacteria.

To kill the bacteria, take two teaspoons of SilverC twice a day. SilverC should also be applied topically twice a day.

You can expect to see reduction in the size and in the damage of the acne within 24 hours. Total improvement of the skin will take about four weeks the amount of time necessary for new skin to grow from the bottom to the top layer.

Age Spots

Age spots develop when the liver doesn't produce enough enzymes to detoxify what is circulating through the blood stream. Certain toxins can be deposited in the fats underneath your skin, creating an age spot usually a permanent effect like a tattoo.

You can get the liver working properly again, and get the proper production of enzymes at the same time, by drinking liquid SilverC on a regular basis. Putting SilverC gel on the age spot can help excrete that which has been stored under the skin. For the best benefit, apply topically two to four times a day and take one teaspoon orally twice a day.

Anti-Bacterial

Found on the skin, in the blood stream, in the intestines, or in the hair, bacteria cause countless diseases. When serious diseases are examined in the lab they find that every serious chronic disease is associated with the presence of pleomorphic bacteria or mould. These damage the immune function that normally protects the cell from foreign invaders. When the bacteria or mould invade a cell and reduce the immune protection, they allow toxins and contagions to enter the cell and damage the DNA, allowing serious disease to originate. SilverC starts killing bacteria in as little as fifteen seconds. If you put SilverC gel, liquid, or mist in direct contact with bacteria, the bacteria will usually be totally destroyed within six minutes. Some bacteria may take longer but can be destroyed with regular SilverC use.

For preventative use, drink one teaspoon of SilverC each morning and night. That dose can be doubled to fight an aggressive bacterial infection. It may be applied topically to any affected areas one to four times a day. Immune-supporting herbs may also be used.

Anti-Fungal

Fungus can get into any warm, moist area and often feeds off of sugars. Cutting off sugars can combat intestinal fungus or yeast. For a yeast or fungus infection in the armpits or vagina, apply SilverC directly to the yeast or take liquid SilverC internally. It can be applied topically one to four times a day, or as needed. The recommended liquid use is two teaspoons, one to three times a day. Acidophilus supplementation may be used simultaneously.

Yeast and fungus can get inside your intestines, causing muscle pain and symptoms of depression and attention deficit disorder. It can also result in all the symptoms of headaches, lymph problems, lupus and autoimmune disorders, including fibromyalgia

Many people have resolved these symptoms by taking two teaspoons of SilverC daily as part of an intestinal yeast and fungus cleanse. The cleanse may be accompanied by one to three weeks of flu-like symptoms while the yeast leaves the body. SilverC colonics have been used in the rectum, and douches are being successful in the vagina.

Anti-Tumour

Tumours can have a myriad of causes. Tumours are almost always caused by a combination of problems. One bacterium is not usually the cause of a tumour, but when bacteria get into the cell and neutralize your immune function, you become more susceptible to other toxins in the air and water. This allows DNA to be damaged and a tumour to form. Bacteria such as hepatitis B can cause cancer. Viruses can also cause tumours and cancer, including the human papilloma virus that can result in cervical cancer in women.

Those with a tumour should drink one to four ounces of SilverC liquid a day, sipping the SilverC every hour for the first 4-8 hours. Drink two ounces a day for the next five days two tablespoons in the morning and two tablespoons in the night. Apply topically two to three times a day to the tumour if it is visible. In addition, you may find an intestinal cleansing with milk thistle beneficial. For more acute problems, drink four

ounces one day and sip it every hour the next day.

If cancer runs in the immediate family, two tablespoons of SilverC in the morning and evening can be used as a preventive method.

Maintaining a diet that is low in fat and sugar and high in proteins, fibre, fruits and vegetables will also help. In addition you want to get at least eight hours of sleeps a night. You'll also want to take supplements that have immune enhancing capabilities. You want to exercise if possible on a daily basis. I'm not talking strenuous, but just a walking type of exercise to make sure your circulation is good and your body's immune function is properly working in concert with your lymph system. You want to neutralize toxins in your air and water using proper filtration in your home. You want to cleanse the intestines and your blood. You cleanse the intestines with an intestinal cleanse, you cleanse your liver by using milk thistle on a daily basis in a supplement form, then you cleanse the blood stream by taking a large amount of antioxidants. And you want to eliminate as much stress as you possibly can.

Anti-Viral

Viruses cause many diseases that we don't have pharmaceutical drugs to cure. For this reason, the human race is at a high risk for virus activity. We have viruses that are being treated incorrectly with antibiotics. Antibiotics do nothing to destroy or cure viral infections. SilverC is very powerful and patented against both reverse transcriptase and DNA polymerase viruses, interfering with the replication process.

By drinking two tablespoons of SilverC in the morning and night, you can potentially defeat an existing viral infection. By inhaling a nebulised form of silver works best for a viral infection in the lungs or sinuses. Drops can also be placed in your ears, eyes, nose, or throat twice a day.

To prevent a cold or flu, drink one teaspoon twice a day. If you are exposed to a lot of coughing and sneezing, the dose can be doubled. Immune-stimulating herbs are also beneficial.

Antibiotic Alternative

According to Dr. Rustum Roy (Penn State University) SilverC is more broad-spectrum than anything found in the drug world or nature. This means SilverC kills more than just a tiny segment of bacteria, like antibiotics do. SilverC kills all the bacteria except the healthy (probiotics) bacteria. This can happen because the healthy flora (lactobacillus) secretes a protective layer or lactobacillus around itself to protect against the acidic stomach acids.

This protective layer prohibits the silver from rupturing the cell membrane because it cannot penetrate through the lactobacillus outer coating. This is demonstrated when a person takes antibiotics, and the action of the drugs kill the healthy flora, resulting in diarrhoea. This is not seen when a person takes a quadruple dose of SilverC. In fact I have swallowed 8 ounces at one time (a 48 times normal dose) and never produced diarrhoea.

Remember it is the SilverC that improves antibiotic function and makes antibiotics up to ten fold stronger when taken with SilverC. It should be noted that a person taking SilverC daily (1

teaspoon 1-3 times a day) should destroy bacterium, viruses and yeast that cause the majority of illnesses, so you may never need to take an antibiotic again. According to a study performed by Nelson labs, SilverC was found to completely kill all tested bacteria and cause NO resistance. This is important because it proves that SilverC is not going to cause the bacteria to get stronger or have the problems that plague antibiotic drugs.

Athletes Foot

Athlete's foot is basically a fungal infection on the skin. It occurs when we put our feet in shoes and keep them in a warm, moist area where fungus can grow. The first step to prevention is to wear clean shoes and reduce the amount of time that your foot stays in a moist sock.

SilverC can be sprayed into your socks or directly on the foot. SilverC gel is an even better option in this situation. It can be applied between the toes to kill any yeast growth. You can also spray silver into your shoes to kill any bacteria. In addition to athlete's foot, fungus can get underneath your toenails. By soaking your feet for 30 minutes every other day in a SilverC bath, you will kill the toenail fungus and the athlete's foot. The fungus will return if you continue to wear shoes or socks that are housing bacteria or fungus. By killing the bacteria and yeast, SilverC will also remove the odour associated with athlete's foot.

B

Bacteria

Bacteria are single cell organisms that actually grow within or outside your body. Left uninhibited, bacteria can cause

disease or death. Many of today's health problems result from bacteria. Pneumonia, one of the leading causes of death in America, comes from bacteria inside of the lungs.

SilverC will destroy bacteria in approximately six minutes. You will feel the effects within the first two hours of use and the benefits will continue as long as you use the product. SilverC should also be combined with vitamins, minerals, essential fatty acids, amino acids, and antioxidants.

Bad Breath

Bad breath is usually caused by bacteria residing in the mouth and gums or between the teeth. Using SilverC rinse can destroy these bacteria. By rinsing the mouth for six minutes in the morning and at night, you will get rid of the bad breath.

Bad breath can also be caused by strep throat or a staph infection. In these cases, bacteria destroy the healthy tissue, causing red blisters and white pus to form in the back of the throat. The odour comes as a result of the degenerating tissue. SilverC is the fastest way to remedy the problem. Spraying SilverC into the nose four times a day can treat odour caused by a sinus infection.

Bedsores

When a bed does not have proper balance, pressure points can form. Irritation or rashes on the skin then lead to open wounds. To treat bedsore, get a good bed with a neutral balance. Do not use too much laundry detergent on bedding and sheets.

SilverC gel can be applied directly to the bedsore one to four

times a day. The gel should be kept in place with a sterile bandage. You can expect improvement to begin very quickly after SilverC is introduced to a wound. Improvement in diabetics may take two to three times longer because of circulation problems.

Black Mould

Black mould is a fungus or yeast that grows in wet areas of the home like showers or walls. The mould will release spores into the air. If these spores reach your lungs, they will produce asthma- and chronic fatigue-like symptoms.

To remove the mould, spray liquid SilverC on it and let it stand for 10 minutes before wiping it off. This will destroy the mould and likely prevent it from re-growing.

Bladder Infection

Urine remains in the bladder for about six hours before it is drained. If bacteria get into the bladder, they will duplicate every 20 minutes a bladder infection can become serious very quickly. The infection will degrade the lining of the bladder and possibly travel up the tubes from the bladder to the kidneys, causing a kidney infection.

To treat a bladder infection, two tablespoons of SilverC should be taken hourly for the first two days. For the next two weeks, take two tablespoons twice a day. You should expect to destroy the bladder infection within the first 12 to 24 hours.

SilverC liquid can be taken with cranberry juice or juniper berries.

Body Odour

Since most body odour is caused by bacteria; SilverC can help control the production of the odour. Spray or apply silver to the affected area and drink one teaspoon twice daily. This can also help with bad breath.

Blood Cleanser

Bacteria, viruses, yeast, parasites, and other toxins can get inside our blood. SilverC is one of the best tools for blood cleansing. It will enter a single red blood cell and cleanse at the cell level.

For acute blood cleansing, take one ounce every hour for four hours. For some serious conditions, you will need to take one four ounce dose every day for the first three days, followed by a maintenance dose of two tablespoons twice a day.

To cleanse your blood each day, take one to two teaspoons, one to three times a day. Vitamin E in soft gel form may also help.

Boils

Boils occur when bacteria or viruses get under the skin and duplicate, destroying the healthy tissue. The duplication produces a pustule, which is similar to cystic acne, only it doesn't need a hair follicle or sebaceous gland to get down into the skin. Boils can be caused by simple irritations such as the rubbing of a belt on the skin or agitation on the side of a foot.

A boil can be treated by applying SilverC gel topically one to four times a day. In some cases, you may want to cover the

boil with a bandage. In addition, you will want to drink two teaspoons of SilverC liquid twice a day.

As soon as the liquid and the gel come in contact with the bacteria, the boil growth will stop. Within about two hours you'll feel inflammation reduction. You will see improvement of the boil within four hours.

Bones

Bones can have a number of problems breaks, infections, and stoppage in the production of bone marrow and red blood cells and pain is almost always associated with these problems. SilverC liquid taken on a daily basis can help reduce the bacteria, virus, and mould within the system, thus reducing the impact on the bones.

SilverC can help reduce the infection rate associated with broken bones or compound fractures, allowing the immune system to repair the bone much quicker. Calcium and magnesium may also be used.

Bowels

Bowels can have a lot of problems from constipation and colitis to infections, diarrhoea, and yeast infections. Taken regularly, SilverC liquid can help destroy the bacteria and yeast that cause many of these problems.

While regular cleanses are very efficient at removing constipation and toxins, often they do not remedy the cause of the problem, which may be yeast or bacteria. SilverC can help destroy the cause of the problem. You should expect to see benefits within the first two days.

Bronchitis

Bronchitis can be bacterial or a virus that causes the inflammation of the bronchioles the tubes that pass air from the throat down into the lungs. Bronchitis results in excess mucus production, clogged lungs, and coughing.

Bronchitis can be cleared up by drinking two teaspoons of SilverC two to four times a day, inhaling from a nebulizer 15 minutes twice a day, and by using an intra-nasal spray twice a day for congestion.

For those living, working, or travelling with someone with bronchitis, spray SilverC into the nose for prevention. The gel can also be applied to the inside of the nostrils. Immune-stimulating herbs and co-enzyme Q10 will also help. A cellular cleanse will prevent toxins and bacteria and viruses from gaining access to the blood stream.

Burns

Burns occur from the sun, radiation, x-rays, fire, heat, and from other chemicals in our environment. SilverC is at its very best when it's used to treat a burn. It reduces pain and inflammation and improves wound healing. SilverC liquid can be sprayed on the burn or used to soak the burn, and the gel can be applied to the wound where a significant reduction in pain, inflammation and tissue damage will be visible in the first hour.

Often burn wounds are so painful that you will want to spray on SilverC liquid or gel. The gel will stay on the wound for a long period of time. The liquid will get into the wound very

quickly, but needs to be reapplied every few hours. Drink one ounce of SilverC liquid twice a day until the burn is gone.

C

Cancer

While silver has proven promising against many health conditions, those who have cancer or who may suspect they have cancer should always consult a physician before pursuing any course of treatment.

Cancer is always caused by a multiplicity of factors. Toxins, poisons, and pesticides have all been proven to cause cancers. Bacteria are one of the greatest causes of cancer because it neutralizes your immune systems, allowing damage inside the cell on the DNA level. It is estimated that up to 60 percent of all cancers have a root in bacterial causes.

SilverC is a broad-spectrum preventative agent. It destroys bacteria in as little as 15 seconds and kills the viruses and mould that may also cause cancer.

Those suffering from cancer should drink four ounces of SilverC on day one and four ounces on day two, sipping it every hour. Drink two ounces a day for the next five days; take two tablespoons twice a day thereafter as a maintenance dose.

Sinus, mouth, throat, or lung cancer patients may want to use an inhaled form of liquid SilverC. One ounce can be inhaled from a nebulizer 30 minutes a day. This allows the SilverC to come in deep contact with the lungs, bronchioles, and sinuses. This approach should be combined with oral SilverC use.

There is also a very experimental method for I.V. usage. About 3,000 cases have used SilverC intravenously, with no reported toxicity problems. An I.V. can be made utilizing 250cc's of SilverC liquid at 10 parts per million. Mix one to one with a D5W mixture hung in a bag and dripped for one hour, given every other day for 10 total doses.

It should be noted that saline solution cannot be used because the salts in the saline inactivate the SilverC, turning into Silver Chloride (a toxic substance). This is a very important formulation and can be adjusted in any parts per million of the SilverC. Using the mathematical proportion of 250cc's, you can use any part per million that you need to begin with.

When you put SilverC liquid directly in the veins it will begin killing even the most serious bacteria in 15 seconds. Noticeable improvements will occur within the first two days. It has shown to be promising against viral infections like hepatitis, against cancer, and even against Epstein-Barr and the AIDS virus. Milk thistle can be used as a liver and intestinal cleanse. Drinking antioxidants daily will help cleanse the blood as well.

Silver and Cellular Abnormalities

According to the Journal of Chem. Medicinal Chem. (Nov. 2007), beams of ultraviolet light can be used to destroy tumours and cancers. Special molecules are injected into the bloodstream and then activated by a beam of ultraviolet light. It only takes a few minutes of light beam therapy to actively attack the cancer cells. The top research scientist (Colin Self) stated: "I would describe this development as the equivalent

of ultra-specific magic bullets.” This break-through in cancer treatment is significant to SilverC because, according to Penn State University Professor Roy, SilverC has been published to resonate at a frequency of 910 terahertz which falls in the same category of ultraviolet light frequency as the antitumor lights (Curr. Science Invest, 2007).

It has been shown that infectious agents are associated with causing solid tumours (Kaposi’s sarcoma), blood-based cancers (Leukaemia) and other forms of cancers such as cervical cancer, which is caused by the Human Papilloma Virus. (Townsend Letters for Doctors, May 2006). As you can see, bacteria, viruses, mould and other infectious agents have been reported to cause cancers. Taken daily, SilverC can prevent cellular bacteria, viruses, and mould so that the single-cell abnormalities never go beyond a single cell.

This is important because once diagnosed, doctors often prescribe chemotherapy or radiation that can cause immune suppression. This suppression of normal immune function allows for multiple pathogens to seed or spread. In this situation SilverC may have the potential to play a dual role: either destroy the infectious agent that causes the cancer and/or destroy the pathogenic load arising from the immune-compromised patients (Townsend Letters for Doctors, May 2006).

Doctor Rentz (Am Acad Environmental Medicine, 2003) reports that the following cancer-associated infections are susceptible to SilverC treatment: HIV (Bull Cancer, 2006), Kaposi’s sarcoma (Eur. Neurology, 2002), Epstein Barr Virus (J. Biol Regul Homeost Agents, 2005), Respiratory syncytial virus

(Paediatrics, 2005), Influenza, Para influenza, Fungemia (J Support Oncology, 2005), Rotavirus (Bone Marrow Transplant, 2005), Cytomegalovirus (Cancer, 25), and streptococcus pneumoniae (Medicine, 2005).

According to a NASA Technical report done at the University of Wisconsin, SilverC can be skilfully administered and due to its picoscaler diffusion capabilities will impregnate all collective atoms within each tumour cell or pathogenic cell with silver ions (Final technical report, University of Wisconsin, and NASA CR-114978, code 3, cat 04). This saturation potential supercharges silvers ability to displace the potassium-dependent glucose transport mechanism which is the exclusive means by which cancerous cells feed themselves, thereby selectively starving cancer cells without harming normal cells (Townsend Letter for Doctors, May 2006).

Published cancer results include:

We studied malignant fibro sarcoma cells (cancerous fibroblasts) and found that electrically injected silver suspended their runaway mitosis. (Becker, 1995).

Women with breast cancer (confirmed by biopsies), each received a single dose of SilverC at a concentration of 18 ppm. The 30 subjects were re-tested by biopsy at day 19 post injection, resulting in 100% normal tissue (Antelman, MS. 2000).

Canker Sores

Canker sores have a myriad of causes. Too much acid in the mouth is the number one cause. The tissue in the mouth gets destroyed by stomach acid, too many sugars, and bacterial or viral infections.

SilverC can help improve the issues quickly. Hold one ounce of SilverC liquid in your mouth for six minutes and then drink it. Repeat this process twice a day. SilverC gel can also be applied topically to the wound.

If the canker sore is a result of the herpes virus, the sooner you get the gel on the wound, the sooner you can stop the virus from replicating and getting worse. You should expect the wound to improve twice as fast with SilverC gel applied to the canker sore than if it were to run its course normally.

Cardiovascular Disease (Heart Disease)

Cardiovascular disease affects the heart, veins, arteries, and the circulation of blood and nutrients throughout the body. It is estimated that as much as 80 percent of all cardiovascular disease has its origin as a bacterial infection that originates in the mouth

Cardiovascular disease can come from a bacterial infection like strep throat or a staph infection. By rinsing the mouth with SilverC liquid, you can kill the bacteria in the gums that lead to cardiovascular disease. This will also kill the bacteria that cause gum disease and bad breath.

Cavities

Teeth are susceptible to cavities. Though the enamel is very hard, sugar and bacteria have the ability to eat away the enamel and cause cavities.

Rinsing your mouth with SilverC regularly will kill cavity-causing bacteria. Rinse your mouth for six minutes with one

ounce of liquid silver two times a day. Then swallow two teaspoons to benefit your entire body. Coenzyme Q10 will also help improve gum health.

Chafing

Chafing occurs when skin rubs against skin or when another piece of clothing rubs against skin. The skin becomes reddened, a rash forms, and bleeding may occur. When applied to affected areas, SilverC gel will speed improvement and reduce pain.

Children

SilverC is safe for use with children. Children require a smaller dose of liquid SilverC than adults. A 50-pound child, for instance, would take one-third the dosage of a 150-pound adult. Children will utilize the gel much more frequently, however, because they have poorer hygiene habits.

SilverC gel can be given to children one to four times a day, and they can drink SilverC liquid once or twice a day. For prevention, I recommend children take one-half teaspoon once or twice a day. This general dosage may be doubled during times of illness.

Chicken Pox

Because chicken pox is a virus, SilverC can be very beneficial in neutralizing the problem. It can also help with the associated blistering and scarring. By applying the gel within four hours of the first outbreak, SilverC will help reduce the impact to the skin. Often the blisters will not completely arise and scarring will be lessened.

If you already have blisters, applying the gel topically one to four times a day will help conditions improve quickly. In addition, you should drink two teaspoons of SilverC twice a day. Chicken pox can return years later in the form of shingles. The dosage will also help with shingles.

Colds

Colds are a virus. A cold gets in your nose and your sinuses and starts to duplicate there, producing a lot of mucus. Many will experience postnasal drip mucus dripping down the back of the sinuses into the throat when they go to bed. The mucus contains a virus or bacteria. When it reaches the back of the throat, it causes swelling and inflammation and can even spread into the ears.

Taking one tablespoon of SilverC three times a day, and spraying intranasal four or five times a day, will help reduce congestions and inflammation. Mouth rinse, eardrops, eye drops, nose drops, and throat spray can all be used as well.

Colitis, Irritable Bowel Syndrome, and Diverticulitis

Colitis is an inflamed colon. Irritable bowel syndrome is characterized by irritated and swollen bowels, and alternating constipation and diarrhoea. Diverticulitis results from overstretched intestines that collect toxins the body starts absorbing the toxins that should be passing out of the body and the toxins can get into the bloodstream.

By taking two teaspoons twice a day, SilverC will kill the yeast that causes these ailments. Herbs like cats claw, digestive enzymes, and acidophilus will also help.

Congestion

Congestion including nasal, lung, and upper respiratory can stop you from breathing properly. Congestion leads to high production of mucus and can clog the nose, throat, sinuses, and lungs. If the congestion is caused by bacteria, it can last for months if the bacteria are not destroyed.

To remove congestion, spray SilverC into your nose one to four times a day and drink two teaspoons of the liquid twice a day. Inhaling silver 30 minutes a day will help lung congestion.

Congestions can create a poor sleep pattern and lead to decreased immune function. A hot, steamy shower will help you clean out your sinuses. Once the sinuses are cleared, spray SilverC high into the nostrils. Rinse your mouth with SilverC as well, swallowing the solution when finished.

Conjunctivitis (Pink Eye)

Conjunctivitis results when bacteria build up on the surface of the eye. It can actually change the white of your eye, causing it to swell and turn pinkish red. If the inflammation is not reduced, the eyesight can be permanently damaged.

SilverC can help when you spray two or three drops of liquid SilverC directly into the eyes one to four times a day. SilverC gel can be placed directly into the eye where the gel will stay in place longer. Drink two teaspoons twice a day for one week or until the problem is remedied. This will usually remedy the problem within the first two to three days. Additional products that help are bilberry, eyebright, and Lutein.

Crohn's Disease

Crohn's disease is an inflammation of irritable bowel syndrome. The main symptoms are abdominal pain, diarrhoea (which may be bloody, though this may not be visible to the naked eye), constipation, vomiting, weight loss, or weight gain.

Though it is an infection, it is not clear if it is caused by bacteria, a virus, a parasite, or all three. By drinking four ounces of liquid SilverC the first day and two teaspoons of SilverC per day thereafter; you can destroy all three potential causes of the symptoms. Crohn's disease is an autoimmune disease because the body attacks itself. For this reason silver is very good at destroying pathogens without inflaming the immune system.

In addition to SilverC liquid on a daily basis, you may want to consider adding acidophilus, cat's claw, and coenzyme Q10.

Cysts

Cysts are usually the result of bacteria that collects under the skin. It grows and produces puss or other kinds of toxins. Take two teaspoons of liquid SilverC twice a day and apply the gel topically four times a day.

D

Dengue Fever

Dengue fever is an acute febrile disease found in the tropics and Africa. It is caused by four closely related viruses. SilverC can help when inhaled from a nebulizer 30 minutes a day and by drinking two teaspoons twice a day.

Unfortunately, Dengue fever can often get into parts of the body the silver has difficulty reaching. If this happens, increase the dosage to one teaspoon six times a day. If this doesn't work after two days, drink one full ounce and then return to the original dosage.

Diarrhoea and Dysentery

Diarrhoea can be caused by a bacteria or virus. Dysentery is a bacterial infection. By taking a teaspoon of SilverC in the morning and at night, you can prevent these infections.

If you already have diarrhoea or dysentery, you should swallow two teaspoons every hour for the first eight hours. The SilverC will help in as little as four hours. Complete improvement may take up to two days. Acidophilus can also be used.

Diaper Rash

When babies wear diapers their skin can be in contact with urine for long periods of time. This warm, moist area of the skin will allow bacteria and fungus to grow very quickly. The skin becomes red and can even crack or bleed. By applying SilverC gel to the diaper rash you will be able to kill the cause of the diaper rash in the first two hours. The redness and pain can be remedied in as little as five minutes in mild cases.

To prevent diaper rash, you can spray a thin layer of SilverC on the inside of the diaper and then allow it to stand for about two minutes. The approach can also be used in children's socks to prevent athlete's foot.

E

Ear Infections

Ear infections are a serious problem. In fact, Centres for Disease Control has requested that physicians no longer prescribe antibiotics for ear infections. The antibiotics make the problem worse by making the bacteria more resistant. We now have bacteria that we can't kill with antibiotics. An ear infection can be a result of bacteria that gets in the inner ear and duplicates itself, destroying healthy tissue along the way. This could possibly leave a person deaf. These bacteria can be destroyed by SilverC liquid after just five minutes of contact. Use a dropper to place five drops into the ear canal while the ear is pointed towards the roof. Keep the ear tilted up for 12 minutes. This will allow the SilverC liquid to get as far down behind the ear as possible. Repeat the process in each ear every 12 hours. You will also want to drink two teaspoons of liquid SilverC twice daily and take vitamin C.

Endometriosis

Endometriosis can be a very nasty inflammatory response in and around the uterus, through the fallopian tubes, and even on the ovaries. It causes very painful menstruation and stabbing pains that come and go on an irregular basis.

SilverC can be taken orally, two teaspoons daily. It can also be used as a douche by pumping two ounces of liquid silver inter-vaginally, holding it for 12 minutes, and then releasing. This will kill bacteria and viruses in and around the cervix.

Epstein - Barr virus

Epstein-Barr virus causes mononucleosis and chronic fatigue syndrome. SilverC has the ability to destroy viruses. Drink four

ounces for two days, sipping every hour. Drink two ounces a day for the next five days. For maintenance, drink two tablespoons in the morning and at night. Use topically as needed.

If you have a uterine yeast infection at the same time, you can use SilverC as a douche, holding it for twelve minutes before releasing. If you need the gel for sore muscles, apply it topically and recognize that acidophilus, vitamins, minerals, and essential fatty acids with coenzyme Q10 may help.

F

Fevers

Fevers are caused by bacteria, viruses, mould, foreign pathogens, and even sunburns. To break a fever, drink one teaspoon every hour (up to eight hours) until the fever breaks. SilverC gel can also be refrigerated and then applied topically to the forehead, temples, or anywhere else the fever is found. If a fever does not break before it reaches 104 degrees, seek the care of a health care professional.

Fibromyalgia

Fibromyalgia is an autoimmune disorder with multiple symptoms. Though a single cause has not been identified, yeast seems to be a common factor. Yeast can leave the intestines and go into the brain. It can also be a neurotoxin, producing fermented fruits and vegetables in the intestines that cause low dose alcohol toxicity.

By cleansing yeast out of the system, most fibromyalgia patients can control some of their symptoms. Yeast can be destroyed by drinking two tablespoons of SilverC two or three

times a day. Gel or spray can be applied to sore muscles once or twice a day as needed for pain or aches. In addition to liver cleansing, vitamins, minerals, and freeform amino acids will all help with fibromyalgia.

Food Poisoning

Food poisoning typically includes symptoms such as nausea, vomiting, abdominal cramping, and diarrhoea. It occurs suddenly (within 48 hours) after consuming a contaminated food or drink. It is usually caused by bacteria and viruses.

To fight food poisoning requires aggressive SilverC use, drinking about one ounce immediately, followed by two tablespoons every hour for the next eight hours. For prevention, drink one to three teaspoons a day. This can be especially helpful when travelling to a foreign country.

You can actually spray SilverC on food to kill the pathogens that cause food poisoning. After spraying, let it stand for two minutes before eating. E. coli and salmonella can also be killed by taking liquid SilverC.

Foot Odour

A very aggressive way to treat the feet is to soak them in warm water for 15 minutes. This will soften the dead skin on the surface, which can be scraped off with a loofah. Now the skin is ready and open for the gel to be applied to the entire foot. There are some sea salt scrubs that seem to help scrape the dead skin off with much more aggression. The EPA has approved the following claim for SilverC: SilverC kills the bacteria that causes foot odour.

Flu (taken from The Silver solution, Dr. Gordon Pedersen, pages 24-25)

Gargling for several minutes, with silver three times a day, can help at the onset of the flu as well. Once the flu has set in, it is harder to combat, but taken at the first sign of illness, it can reduce symptoms to one to three days. Like treatment of the common cold, silver may best be a preventive treatment when dealing with the flu. Consider regular consumption during the flu season.

G

Gastritis and Gas

Gas can be produced from yeast and sugar mixing with fruits and vegetables in your intestines. It can also be produced directly from certain fruits, vegetables, and bacteria. Most people think that gas is produced by eating beans. In reality, a bacterium on the surface of the bean produces gas.

SilverC can help because it destroys bacteria that cause gas. If you have a gas outbreak including painful air pressure in the intestines take two teaspoons every hour for the first few hours.

In addition, you might want to try acidophilus and a digestive cleanse. Digestive enzymes can also be of assistance.

Genital Herpes

Genital herpes is a virus affecting the genital area. Applying SilverC gel topically can help the outbreak improve more quickly. It should be placed on the genitals as soon as the outbreak occurs. In addition, drink two teaspoons of SilverC

liquid twice a day. Daily silver use will also help prevent future outbreaks.

Gingivitis

SilverC can be placed into the dental floss container and disinfect the floss that carves food off the tooth and gums. It also cuts into the gums and can cause infections, so pour two tablespoons of liquid SilverC into the dental floss container and use this disinfectant floss between your teeth.

H

Hepatitis

Hepatitis is an inflammation of the liver that destroys its function and can be caused by viruses or bacteria. It is very difficult to treat but SilverC can be used in high doses to be beneficial. SilverC liquid can be swallowed 4 ounces a day for the first two weeks, and then swallowed two tablespoons twice a day for the next 3.5 months. This is a four-month attack on hepatitis. Gel can be used anywhere there might be contamination or transfer of germs.

Several successful subjects have used the drugs interferon and ribavirin at their lowest prescribed doses in combination with this protocol of SilverC. The liver numbers were reduced to near normal in one month and back to normal in two months and symptom-free in four months.

Human Papilloma Virus (HPV)

The human papilloma virus is usually what causes cervical cancer in women. To reach the cervix, place SilverC gel on a tampon and insert it for at least 90 minutes. Another way to affect HPV is to pump two ounces of liquid SilverC as a douche

inter-vaginally. Hold it for 10 to 12 minutes before releasing. This will allow the liquid to have access to the cervix for a long enough time to destroy the virus.

I

Immune Modulator

In HIV patients SilverC liquid was used 1 oz. twice a day for four months and improved immune function an average of 40%. This means in an autoimmune and virus induced compromise, the SilverC liquid can improve the cellular number and reduced all symptoms of the AIDS patients. In normal people the improvement is less but the over protection is greater.

Impetigo

Impetigo is a bacterial infection of the skin that shows up as blisters usually around the mouth. For prevention, drink one teaspoon of SilverC twice a day. If you already are suffering from impetigo, drink two teaspoons twice a day and, more importantly, apply the gel topically one to four times a day. By keeping impetigo moist with SilverC gel, it will spread less and improve much quicker. Since impetigo is contagious you will want to apply the SilverC gel to your hands as well in order to prevent contaminating yourself or others.

Inflammation and Swelling

Inflammation is almost always caused by bacteria, viruses, parasites, or mould. SilverC can fight these causes. Drink two teaspoons twice daily and apply the gel to inflamed areas as needed. Sometimes an inflammatory response is found around an open wound like an MRSA or staph infection. In this case, spray the gel on the affected area twice daily.

Itching and Scaling

Itching and scaling can occur for a lot of reasons bacteria, viruses, fungi, and allergies are just some. Regardless of the cause, dry skin is always a factor. SilverC gel will reduce pain, inflammation, itching, and scaling. The gel can be applied to children and adults of any age. SilverC can also be used to remedy poison ivy.

J

Jock Itch

Many men suffer from jock itch, or red, inflamed skin. If you live in a warm, humid, or tropical climate, you may have a fungal or bacterial infection that grows in the warm, moist folds of the skin, including the groin. Simple application of the SilverC gel twice daily should keep it under control. For more aggressive cases, it can be used five times a day. In addition, one teaspoon for SilverC liquid should be taken twice a day.

K

Keratosis

Many people have precancerous lesions from sun damage on their shoulders, chest, and face. It presents itself as dry, flaky skin spots or small, reddened, inflamed areas on the skin for years before it becomes a skin cancer.

SilverC gel can be applied topically once or twice a day, and one teaspoon of liquid silver can also be taken twice a day. I have seen a case of Keratosis remedied in as little as two weeks. Treatment should generally be followed for at least two months.

Kidney Disease

SilverC passes through the body totally unchanged and does not produce harmful metabolites. It will pass through the intestines, bloodstream, kidneys and urine, producing anti-bacterial and anti-viral effects.

To help kidney disease, drink two teaspoons four times a day. (A smaller person will use one teaspoon four times a day.) This high dosage is necessary because it needs to pass through the kidney on a regular basis. As it passes through, it will disinfect and help bring the kidney infection under control in as little as 12 hours.

L

Leprosy

Leprosy is bacteria that have become resistant to antibiotics. In biblical times, it was the worst contagious disease in existence. Those suffering from it were quarantined to leper colonies. It may surprise you to know that there are still leper colonies today in Hawaii.

SilverC can destroy leprosy. By drinking two teaspoons two to three times a day and applying SilverC gel topically three times a day, you can fight even the most serious leprosy wounds. Lepers have been able to bring their disease under control within two days using SilverC.

Leishmaniasis

Leishmaniasis is a parasitic infection. It shows up just under the skin as a purple rash and raises welts and boil-like symptoms all over the body. Soldiers in Afghanistan have been suffering from this infection and it has been very difficult to

remedy.

The army hospital at William Beaumont Army Medical Hospital conducted a study on Leishmaniasis, using SilverC liquid and gel. They found that the parasite could be destroyed by drinking two teaspoons two to three times a day. The gel should also be applied two to four times as needed. You can expect to see a benefit over the course of eight weeks.

Liver Disease

The liver is one of the most important organs of the body. It detoxifies the blood and secretes over 4,000 enzymes. When the liver is inflamed, like in the case of hepatitis, it won't secrete as many enzymes and the blood will not be purified quickly.

SilverC can destroy the bacteria and viruses that harm the liver. By restoring proper liver function, all systems of the body are benefited, and overall wellness is increased. For these results, drink two tablespoons of SilverC twice daily. For severe cases of hepatitis, this amount should be doubled.

Lupus

Lupus is an autoimmune disease that can affect various parts of the body, including the skin, joints, heart, lungs, blood, kidneys, and brain.

Because it is an autoimmune disease, you can't use major immune stimulation products. SilverC can be used to kill the bacteria, viruses, mould, and parasites that may be the cause of the lupus. It will do this without making the lupus

symptoms worse.

SilverC can be of benefit when you drink one teaspoon three times a day. It can also be applied topically to facial rashes commonly caused by lupus. In addition, you can use acidophilus, antioxidants, coenzyme Q10, and an intestinal cleanse.

M

Malaria

Malaria is probably the world's most significant disease. According to the World Health Organization, over a million children under five years old die from it every year the majority in Africa. As the earth becomes warmer and more humid, the mosquitoes that transfer malaria will start to invade all areas of the earth, not just the warm and tropical areas.

To fight malaria, drink a total of one ounce of SilverC each day. On average, the disease will be neutralized within five days. The dosage should be continued for two weeks. To prevent malaria from infecting the ears, eyes, or causing diarrhoea, put SilverC on your hands, mouth, and nose. Liquid silver can also be sprayed on these areas.

Mould and Fungus

Fungus and mould grow in warm, moist, and sugared areas such as the intestines or vagina. Taking sugar out of your diet and using silver both topically and internally can treat these. Take two teaspoons of silver three times a day and apply it topically one to four times a day, if needed. This dosage should be continued for at least two weeks longer than

symptoms are present.

You can expect to see a benefit within the first 30 minutes. It will take at least 10 minutes for the liquid to kill a fungal infection on the skin. Silver will work best when taken with complementary products such as probiotics, Caprylic acid, anti-yeast diets, essential fatty acids, and amino acids.

Silver can also be sprayed on household items. In about 10 minutes it will kill the fungus, bacteria, or viruses on your table, food, clothes, phone, refrigerator, or toilet.

Methicillin Resistant Staph Aureus (MRSA)

On any given day in America there are 30,000 new cases of MRSA. This is a bacterial staph infection that has become resistant to our antibiotics. It can affect the skin, eyes, or any other part of the body. It can be fatal. SilverC gel and SilverC liquid have been tested and documented to destroy MRSA and staph infections. To prevent these infections, drink one teaspoon of liquid SilverC twice a day and apply silver gel to the hands at least twice a day.

MRSA can enter any wound and all of us have some form of staph bacteria on our skin at any given time. By using public restrooms, shaking hands, hugging, kissing, or any other skin-to-skin contact, you may be at risk of getting or sharing staph MRSA infections.

P

Parasites

The World Health Organization estimates that one in four people have a chronic parasitic infection of some kind. It may be in the intestines, under the skin, or in the lungs. Parasites

can come from the food we eat, including pork and fish. Once they are inside our bodies, they lay eggs. The eggs hatch and take up residence in the body, and then the process is repeated. It is important to get rid of parasites permanently.

SilverC can help. It does not kill all parasites, but it does help in the intestines, in the blood, and with Leishmaniasis. SilverC will need to be used for three months, as the lifecycles of each generation of parasites is about 45 days. During this time, drink two teaspoons twice a day. Black walnut hulls, digestive cleansing, and milk thistle will also help the process.

Pet Use

You can use SilverC liquid or gel for your pet. If a pet weighs 20 pounds, it should receive one fourth of the human dosage. In most cases, pets take one fourth to one sixth of the normal human dose, but they can safely take up to quadruple doses when they have a problem.

Pneumonia

Pneumonia is an inflammatory illness of the lung and is caused by both viruses and bacteria. The lungs can become so filled with fluid that asphyxiation occurs. SilverC can destroy the bacteria or the viral infection that causes pneumonia. The recommended dosage is two teaspoons, two to four times a day; 15 minutes of inhalation from a nebulizer; and intranasal spray twice a day to reduce congestion. You should expect to see benefits in the first 12 hours. In severe cases an IV protocol is an option (see also Cancer).

Post-Surgical

Surgery opens the possibility of infection in wounds, stitches,

and incisions. Hospital-acquired Methicillin-resistant staph Aureus infections (MRSA) are one of the most dangerous infections you can get. SilverC gel should be applied to the wound, stitches, and the surrounding area immediately after surgery. This will prevent infection, help wound healing, and reduce scarring.

Poultice

Silver gel can be placed on a body part and then wrapped in place as a poultice. This allows the wound to remain uncontaminated and to improve quicker. Silver poultice has been used in horses for years to treat infections. It can be mixed with any other desired herbs.

Prostate Disease

A prostate is the gland that closes off the flow of urine from the bladder. When the prostate relaxes, urine will flow out of the bladder and into the toilet. The prostate gland then tightens back up on the ureter and stops the urine flow. Over time, the prostate muscle becomes bigger. If it becomes infected with bacteria, it will swell and become too large and shut off the flow of urine, making you unable to urinate.

SilverC can destroy the bacteria that cause the prostatitis. By drinking two teaspoons twice a day you will have enough circulating in your system to go through your urine and kill the bacteria in your bladder and prostate. Some people have felt a benefit by placing the gel between the rectum and scrotum. Using saw palmetto twice a day should also reduce inflammation in the prostate. For those who have access to a catheter, 2 oz. of liquid SilverC can be pumped directly into the catheter and into the bladder for ten minutes where it will

kill pathogens.

Psoriasis

Psoriasis is a disorder that affects the skin and joints. It commonly causes red scaly patches to appear on the skin. This condition makes you very susceptible to secondary bacterial infection getting into the cracked areas of the skin.

To fight the bacteria, apply SilverC gel two to four times a day, keeping skin, wounds, or rashes very moist. Drink one teaspoon of SilverC liquid twice daily. For very dry, scaly skin, SilverC liquid and gel can be mixed with Vaseline (one part gel, liquid, and Vaseline). This will keep the affected areas moisturized for a much longer period of time. Aloe Vera can also be used and mixed with the gel. This will help with the most difficult situations, including Morgellons disease.

Pus

Pus is produced when bacteria break down and destroy healthy cells. Apply SilverC topically to affected areas one to four times a day and drink two teaspoons of SilverC twice a day. If pus is being produced in your throat, e.g. sore throat or strep throat, rinse your mouth with SilverC liquid or apply gel to the throat. Try to keep in place for 6 minutes.

Pyorrhoea (Gum Disease)

In addition to causing bad breath, gum disease erodes the gums and bones around the teeth, causing the teeth to fall out. Gum disease can be prevented by rinsing your mouth with one ounce of SilverC six minutes each day the remaining rinse should be swallowed. You may also brush your teeth with SilverC gel. Co-enzyme Q10 will also be of benefit. You

can expect to have a benefit after the first brushing of your teeth. After three days you will have noticeable improvement.

R

Rashes

Rashes can occur on any part of the body. They can come from irritation or chemicals that irritate. By putting SilverC gel right on the rash, you will moisturize, detoxify, and quicken healing. Apply one to four times a day and swallow one teaspoon of SilverC liquid twice a day.

Rosacea

Rosacea is a form of bacteria that grows on the nose, making it red and swollen with pimples. This can leave very large scars. Because it is difficult to treat, doctors generally prescribe antibiotics.

Rather than use antibiotics, you can drink two teaspoons SilverC liquid twice a day and apply gel four times a day. Wash the nose lightly between each application. You should see a reduction of redness within the first two hours and a reduction of pimples in the first day.

S

Sore Throat

A sore throat is generally caused by bacteria, but may also be a result of a virus. To kill the bacteria that cause pus, swollen tonsils, and red spots in the back of your throat, rinse your mouth with one ounce of SilverC for six minutes. Allow a small amount of the solution to trickle down the back of your throat and swallow every 30 seconds. Swallow the remainder when you're done. Pump SilverC into your nasal cavity as needed for

sore throat, congestion, or postnasal drip. Sinuses and throat need to be treated simultaneously so one does not infect the other.

T

Thyroid

The thyroid gland is the major gland for the hormone system of the body. Damage to this gland can result in lack of energy, too much energy, weight gain, or weight loss. SilverC can help because often the thyroid is damaged by a viral or bacterial infection. Drinking two teaspoons twice a day and applying SilverC gel to the throat will result in significant thyroid benefit.

Toenail Fungus

When SilverC comes in contact with toenail fungus, it will kill it within minutes. The problem is getting underneath the nail. If possible, get through the nail and clear out as much fungus as possible with a blunt instrument. The toenail fungus can then be treated by soaking the toe in SilverC for 30 minutes every other day.

If you can't get the SilverC through the nail, file down the top layer of the nail until it becomes water soluble. This will allow the silver to reach the fungus and kill it. It will take several months for the nail to grow out completely.

Tonsillitis

Tonsillitis is the inflammation of the tonsils. It's almost always caused by bacteria. Once it begins, it often has to be resolved surgically. This is unfortunate because tonsils are a key organ in the immune system.

By rinsing with one ounce of liquid SilverC for six minutes each day, you will kill the bacteria. This process can be repeated daily for a very serious tonsillitis flare up. Spraying silver into the nostrils will also help. The more contact the silver has with the back of the throat, the faster it will work.

Tongue

The tongue can suffer from a number of maladies, including canker sores and bacterial and viral infections. Whatever the cause of the problem, you should rinse with one ounce of liquid SilverC for six minutes twice a day.

If you have a white pasty substance on your tongue, it's likely a yeast infection. You may want to brush your tongue with SilverC gel in addition to the rinse. For cankers, you can also apply SilverC gel directly to the tongue.

Tuberculosis

Tuberculosis is a common and often deadly infectious disease caused by mycobacterium. Tuberculosis has been destroyed by SilverC in laboratory studies. By drinking two teaspoons twice daily and inhaling from a nebulizer 30 minutes each day, you will affect the tuberculosis in both the lungs and the bloodstream.

Tuberculosis is not easy to beat. This dosage of SilverC may need to be followed for weeks or months. You should see benefits after the first dose and each repeated use.

U

Ulcers

Ulcers are caused by a bacterium called *H. pylori*. It destroys the lining of the stomach and intestines, sometimes causing a bleeding ulcer. By drinking one teaspoon of SilverC three to five times a day, it can enter the stomach and destroy the bacteria causing the ulcer.

It should take two weeks to get the *H. pylori* under control, but treatment should be continued for at least a month. *H. pylori* can return just by having poor hygiene, eating out at restaurants, or not washing your hands. Using SilverC gel can prevent its spread.

V

Vaginal Odour

Vaginal odour can often be caused by a yeast or bacterial infection. SilverC can be used as a douche by pumping two ounces of SilverC liquid inter-vaginally, holding it for twelve minutes, and then rinsing. Apply SilverC gel to a tampon and insert into the vagina.

For continued problems, SilverC gel can be applied to the outer areas of the vaginal opening or placed on a panty liner.

Viruses

A virus is a sub-microscopic infectious agent that is unable to grow or reproduce outside a host cell. We generally fight viruses with antibiotics. However, antibiotics do not actually destroy the virus. For many viruses, such as influenza or the bird flu, there are virtually no beneficial drugs or treatment.

SilverC resonates at a frequency that can actually suppress and contain viral infections by interfering with the duplication and replication of viral infections. If you can stop a virus from duplicating in the first four hours of infection, you have a good chance of stopping symptoms entirely.

When the herpes virus infects the skin, we call it a canker sore or cold sore. If you use SilverC within the first four hours of feeling the sore, it will not even erupt. However, if you don't get it in the early phases, viral infection will duplicate and become much more difficult to control. This is why regular, preventative use is so important

To fight viruses, SilverC can be taken internally as a liquid, topically as a gel, or inhaled to combat sinus problems. You can expect a noticeable benefit to be felt within the first two hours and significant benefits within the first two days.

W

Warts

Warts are usually viral infections that have gotten under the skin and reproduced in a way that makes thickened, callused tissue around it. If you can get the SilverC down inside the wart it will actually kill the virus and it will die. By drinking two teaspoons of SilverC twice a day, it will circulate in your blood stream. Combined with topical application of the gel, you should see significant benefit.

For quicker, more complete results, pare down the wart with a sharp instrument. (Warts do not have pain receptors. When you feel pain, you've reached the skin.) Put the SilverC on the exposed portion of the wart.

Water Purification

Water can be purified using SilverC liquid. By applying four drops of SilverC liquid into an eight-ounce glass of water, and letting it stand for about two minutes, it will purify even raw river water. Add 32 ounces of liquid SilverC to a 55-gallon drum of water to keep your water storage purified for years.

Wound Healing

Wounds come in many forms burns, cuts, lacerations, bruises, broken bones. SilverC has been documented to help improve wound healing. In a study done at the University of Utah, pigs healed substantially faster and had fewer bacteria, viruses, and mould when treated with SilverC.

SilverC gel can be applied topically to any wound one to four times a day. By keeping the wound moist, it will improve quicker and with less scarring. Drinking two teaspoons of liquid SilverC twice a day will help improve wounds in the nose, ears, eyes, nose, throat, or any part of the body.

Y

Yeast

Yeast grows in the skin, vagina, and digestive system. It can be very damaging because it feeds off the very cells that are healthy and normal inside our intestines. Yeast lives in warm, moist areas and feeds off sugars.

SilverC has been documented to kill yeast both inside and outside of the body. It will even kill *Stachybotrys*, the black mould or yeast that grows in showers and on walls.

To fight intestinal or vaginal yeast, drink two tablespoons of SilverC in the morning and at night. Half that dosage can be taken for prevention. Acidophilus, dietary fibre and digestive cleansing can help if you have an intestinal problem.

If yeast is in the intestines, it is important to remove sugars from the diet, as it feeds on sugars. SilverC gel can be placed in the vagina or on a tampon or panty liner for about 90 minutes to fight a vaginal infection.

You should expect to find a benefit in the first two hours after use. Systemic problems may take months to resolve.
